NAME

wcrtsrc

PURPOSE

Creates a source on the event server.

SYNOPSIS

Wcrtsrc [**-S** *server*] [**-b** *bitmap*] [**-l** *label*] *source*

DESCRIPTION

The **wcrtsrc** command appends a source to the current source list on the event server. The *source* name is checked to be sure it is not a duplicate before it is added to the list. Sources send event information to the Enterprise Console via event adapters. The event adapter defines the name for a source.

Authorization

senior

Arguments

-S *server*   Specifies the name of the event server in name registry format. The default is the local event server. To specify a remote server, enter **@EventServer#*tmr***, where *tmr* is the name of a xxxxxx xxxxx xxxxx (TMR).

-b *bitmap*   Displays the specified bitmap on the event console. The bitmap must be the name of a bitmap stored at the server.

-l *label*   Uses the specified label as the name of the source on event consoles. If this argument is not specified, the value specified in the *source* argument is used as a label.

source   Specifies the name of the source to create. The name must correspond to the name specified by the event adapter.

EXAMPLES

The following example adds the **LOGFILE** source to the local TMR and labels the source **Logfile**:

```
Wcrtsrc -l "Logfile" LOGFILE
```
